March 2014

**HESI Board Member Recognized for Occupational and Environmental Toxicology Contributions.** Congratulations to Professor Alan Boobis (Imperial College London) of the HESI Board of Trustees who received the **Royal Society of Chemistry’s Toxicology Award** for his work on the human metabolism of carcinogens and his extensive involvement in scientific committees for the government of the United Kingdom, the European Commission, and other international groups.

**HESI Science at the 2014 Annual Meeting of the Society of Toxicology in Phoenix, Arizona.** Click [here](#) to see the comprehensive list of scientific posters, symposia, and workshops that feature HESI science. Also, don’t forget to [register](#) for the HESI CITE Seminar (formerly known as the HESI SOT Lunchtime Seminar) to be held Monday, 24 March 2014, at noon. This year’s speaker is Dr. Peter Kuhn (Scripps Research Institute), a dynamic scientist who brings together physics and oncology to create powerful applied translational science for detection of circulating tumor cells.

UPCOMING WORKSHOPS

Registration Is Now Open — Workshop on the Assessment of Respiratory Sensitization. The HESI Immunotoxicology Technical Committee is organizing this event in Alexandria, Virginia, on 28–29 May 2014. This workshop will discuss the current state of the science for identification and characterization of respiratory sensitizer hazards, identify the near- and long-term information to facilitate development of validated standard methods and frameworks, and consider regulatory and practical needs regarding hazard management. For more information, visit the workshop website or contact Dr. Connie Chen (cchen@hesiglobal.org).

Registration Is Now Open — Workshop on Genetic Toxicology at the Crossroads: From Qualitative Hazard Evaluation to Quantitative Risk Assessment. The HESI Genetic Toxicology Technical Committee is organizing this satellite workshop of the European Environmental Mutagen Society 2014 Annual Meeting hosted by the UK Environmental Mutagen Society in Lancaster, United Kingdom, on 10–11 July 2014. It is becoming increasingly apparent that the genetic toxicology community should move away from qualitative hazard-based approaches to quantitative risk-based methodologies to facilitate data interpretation in the context of informing human risk. The workshop will bring together experts in the fields of genetic and general toxicology, risk assessment, and computational biology representing industry, academia, and government to address and make recommendations on a path forward on this topic, including the identification of any key data gaps in our knowledge that require further research. Although the focus of this workshop is on genetic toxicology studies, the key learnings from this effort will have a much broader impact across various toxicology disciplines. For more information, visit the workshop website or contact Dr. Jennifer Young Tanir (jtanir@hesiglobal.org).

FROM THE EXECUTIVE DIRECTOR

2014 is a year of milestones for HESI. We celebrate the 25th anniversary of the organization, the largest number of partner organizations (both public and private) that HESI has engaged in its history, the most submissions of new topics to HESI’s Emerging Issues Committee, and more. Registration is now open for our June 2014 Annual Meeting. Register now to make this our most highly attended Annual Meeting yet and help us set new milestones for 2015!
